Allowable Subject Matter

2. Claims 1-24 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1,11,21,23, The prior art of record considered alone or in combination neither anticipates nor renders obvious a method for sharing load information between radio network controllers connected to a core network by a first standard interface and to each other by a second standard interface, determining in said first radio network controller over said standard interface a common measurement load value and that a certain type of load condition exists from among a plurality of different types of load conditions indicative of the nature of the type of load condition in said environment where said data is sent via at least one of said multiple Node signaling said second radio network controller over said standard interface that, said certain load condition exists and including a measurement report with said common measurement load value and, in addition, that said certain type of load condition exists with a proposed action using an information element indicative thereof.

The prior art of record provided numerous teachings of synchronization with offsets and timing relationships. However, the prior art of record failed to specifically disclose a method comprising a common measurement load value and that a certain type of load condition exists from among a plurality of different types of load conditions indicative of the nature of the type of load condition in said environment where said data is sent via at least one of said multiple Node signaling said second radio network controller over said standard interface that.
